

## Summary

Duration: 3 days

This course is a collection of modules designed to stretch your knowledge beyond the fundamentals of the language.

The course is highly tailorable and most of our customers like to add and remove modules to their taste (the 3 days duration is just a guide based on 6 of the available modules).

As with all of Inception's courses, the course is very practical and all concepts are applied to a real world project.

## Detailed Course Description

- Reflection
- Remote Method Invocation
- Java Security Model
- Internationalization
- Java and XML
- JDom and Dom4j
- Jakarta Commons
- Ant and Maven
- An Introduction to Hibernate
- XDoclet
- JUnit and Mock Objects
- Maven
- CruiseControl

## Objectives

By the end of the course attendees will:

- Be able to apply more advanced concepts to their day-to-day Java work
- Have a good understanding of the available open-source extensions to Java

Each theory session is followed by a practical session.

## Prerequisites

A good working knowledge of Java – as a minimum delegates should have at least a month of hands on programming experience or have previously attended the Java Programming course (or similar).
